*Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-25, drawn to a cellulosic structure and a composition for softening a cellulosic structure, classified in classes 162, 428, 536, or 604, subclass various.
- II. Claims 26-45 drawn to a method of producing a soft tissue paper product, classified in class 162, subclass 109.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process. A cellulosic structure with a softening composition need not be a soft tissue paper, but could be, for example, a diaper or a biodegradable woven textile, each made by a different process. A search of the two inventions I and II would present an undue burden on the examiner, because it would require searching classes with little overlap of subject matter.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
